■ Admin CMS

Full management dashboard. Inventory tracking with stock alerts, weekly staff rostering, invoice management, and a live reservations board with one-click confirmation.

■ Employee App

Mobile-first staff portal. Personal shift schedules, opening checklists, team roster view, and inventory purchase flagging that feeds into the AI ordering system.

■ Client App

Customer-facing PWA. Browse the full menu, make reservations, track loyalty points, redeem rewards, and view past order history — installable on any phone.

◆ AI-POWERED SMART ORDERING — CLAUDE API

Analyses stock levels, sales velocity, staff flags & weekend demand to generate prioritised purchase recommendations — with a plain-English manager brief generated on demand.

// WHAT WAS BUILT

- Real-time Supabase/PostgreSQL database shared across all 3 apps with Row Level Security
- Staff purchase flagging — employee notes feed directly into AI ordering recommendations
- Client reservations saved to database, visible instantly in the admin portal
- All 3 apps deployed separately on Vercel with individual live production URLs
- Progressive Web App (PWA) — client app installable on mobile without the App Store
- AI Manager Brief — Claude generates a 30-second procurement summary on demand

More projects in development — this is an actively growing portfolio.
